How to Use This Tracker

Ninety days is the number that matters: it is roughly the period an A1C test reflects and the interval most doctors use between reviews. Fill this book completely and you walk into your next appointment with the full picture.

Each day gets one page: fasting reading, glucose before and after each meal, medication or insulin doses, what you actually ate, and how you felt. Honest beats perfect — a real log with gaps is worth more than a tidy one with invented numbers.

Every week, complete the Weekly Review to spot patterns: which meals spike you, how activity and sleep move your numbers. Every 30 days, fill in a Monthly Summary to bring to your care team.

Ask your doctor for your personal target ranges and write them on the front page. This book records; your care team advises.
